Amendments to the Specification:

Please <u>ADD</u> the following section to the specification after the Brief Description of the Drawings at page 4, line 4.

--

Summary

A prediction engine that receives data meant to represent alphanumeric information from a user and predicts at least one additional item of alphanumeric information based upon that received data and upon a personal context model for that user is disclosed. The personal context model includes both a personal language model that represents a statistical analysis of prior alphanumeric content for this particular user and context markers that correlate to the personal language model in significant and dynamic ways.
